

**Sample. Not a real patient.** Every name, date, dose, and result on this document is illustrative. It shows the format a Kinvisit family receives after each attended consultation.

Visit 1 · Endocrinology

12 March 2026

SEEN AT

Multi-specialty OPD, South Delhi

CLINICIAN

Consultant endocrinologist. Name recorded in your copy.

WHAT THE FAMILY ASKED, AND WHAT CAME BACK

**Her right hand has been swelling since January. Has it ever been mentioned?**

No note of it in the file. Doctor examined it, said to keep watching it, ordered no test.

**Are the morning sugars high enough to change anything?**

Yes. Metformin doubled from today.

INSTRUCTIONS, AS GIVEN

- Metformin to 1000mg twice daily, from tomorrow morning.
- Fasting sugar log to be brought to every visit.
- Return in four weeks. Sooner if the swelling spreads above the wrist.

MEDICATION

| MEDICINE                        | CHANGE    | REASON RECORDED                                   |
|---------------------------------|-----------|---------------------------------------------------|
| Metformin 500mg BD to 1000mg BD | Increased | Fasting sugars high through February. HbA1c 8.4%. |
| Atorvastatin 10mg OD            | Unchanged | Continued.                                        |

Reconciliation. Checked against 3 standing medicines. No interaction flagged.

TESTS

- None ordered.

UNRESOLVED

- Right-hand swelling. Doctor advised monitoring. No test ordered. (open)

NEXT VISIT

09 April 2026 · nephrology referral

# Visit 2 · Nephrology

09 April 2026

SEEN AT Multi-specialty OPD, South Delhi

CLINICIAN Consultant nephrologist. Name recorded in your copy.

WHAT THE FAMILY ASKED, AND WHAT CAME BACK

**The swelling did not settle. Is this the kidneys?**  
Renal panel ordered on the spot and read in the room. eGFR 58, which is mild impairment.

**Does the diabetes medicine need to change because of this?**  
Not yet. Doctor said review Metformin only if eGFR falls below 45.

INSTRUCTIONS, AS GIVEN

- Start Telmisartan 40mg once daily.
- Salt restriction discussed.
- Repeat renal panel in eight weeks.

MEDICATION

| MEDICINE            | CHANGE  | REASON RECORDED                                    |
|---------------------|---------|----------------------------------------------------|
| Telmisartan 40mg OD | Started | For blood pressure and renal protection.           |
| Metformin 1000mg BD | Held    | Held at current dose. Review point set at eGFR 45. |

**Reconciliation.** Checked against 4 standing medicines. Metformin flagged for review if eGFR falls below 45.

TESTS

- Renal function panel. Result: eGFR 58 mL/min/1.73m2, creatinine 1.1 mg/dL.

UNRESOLVED

- Swelling now unresolved across two visits. (open)
- eGFR 58. Recheck due by 04 June. (open)

NEXT VISIT

14 May 2026 · endocrinology review

# Visit 3 · Endocrinology

14 May 2026

SEEN AT Multi-specialty OPD, South Delhi

CLINICIAN Consultant endocrinologist. Name recorded in your copy.

WHAT THE FAMILY ASKED, AND WHAT CAME BACK

**Does the endocrinologist know about the kidney result?**

No. The referral was not on their screen. The companion produced the April report and it was read into this consultation.

**Is a second diabetes medicine safe with the kidney result?**

Doctor kept the starting dose low for that reason.

INSTRUCTIONS, AS GIVEN

- Add Glimepiride 1mg once daily, before breakfast.
- Watch for low sugar in the late morning.
- Bring the repeat renal panel to the next visit.

MEDICATION

| MEDICINE           | CHANGE  | REASON RECORDED                                |
|--------------------|---------|------------------------------------------------|
| Glimepiride 1mg OD | Started | HbA1c improved to 7.6% but still above target. |

**Reconciliation.** Checked against 5 standing medicines. Low-sugar risk noted for Glimepiride alongside reduced renal clearance. Dose held at 1mg.

TESTS

- None ordered.

UNRESOLVED

- Renal panel recheck now two weeks overdue. (open)

NEXT VISIT

11 June 2026 · orthopaedics

# Visit 4 · Orthopaedics

11 June 2026

SEEN AT Multi-specialty OPD, South Delhi

CLINICIAN Consultant orthopaedic surgeon. Name recorded in your copy.

WHAT THE FAMILY ASKED, AND WHAT CAME BACK

**Six weeks of right knee pain. What is the plan?**

A course of oral anti-inflammatories was proposed at the start of the consultation.

**She had a kidney result in April. Does that change the plan?**

Yes. The companion produced the eGFR 58 result. The oral drug was withdrawn and a topical gel prescribed instead.

INSTRUCTIONS, AS GIVEN

- Do not start the oral anti-inflammatory.
- Apply diclofenac gel twice daily to the right knee.
- Repeat renal panel booked for 24 June.

MEDICATION

| MEDICINE                   | CHANGE      | REASON RECORDED                                        |
|----------------------------|-------------|--------------------------------------------------------|
| Diclofenac 50mg BD, oral   | Withdrawn   | Withdrawn on renal grounds. eGFR 58 recorded in April. |
| Diclofenac gel, topical BD | Substituted | Local action, minimal renal load.                      |

**Reconciliation.** Companion produced the eGFR 58 result from the April nephrology visit. Oral anti-inflammatory withdrawn on renal grounds and a topical substituted.

TESTS

- Renal function panel ordered. Booked for 24 June.

UNRESOLVED

- eGFR recheck ordered and booked for 24 June. (resolved)

NEXT VISIT

09 July 2026 · nephrology, with the June panel carried

# Medication history across all four visits

Nobody holds this table today. Not the cardiologist, not the nephrologist, not the family. It is built one visit at a time, and it is what made the fourth visit safe.
